## 1-Phase AC/DC Over Voltage - AC Over Current

### Types DUA01, PUA01

DUA01

PUA01

- AC/DC over voltage monitoring relay
- Selection of measuring range by DIP-switches
- Measuring ranges: 2 to 20 VAC/DC, 5 to 50 VAC/DC, 20 to 200 VAC/DC, 50 to 500 VAC/DC, 0.4 to 4 V<sub>p</sub> AC
- Adjustable voltage limit on relative scale
- Adjustable hysteresis
- Programmable latching at set level
- Output: 8 A SPDT relay normally de-energized
- For mounting on DIN-rail in accordance with DIN/EN 50 022 (DUA01) or plug-in module (PUA01)
- 22.5 mm Euronorm housing (DUA01) or 36 mm plug-in module (PUA01)
- LED indication for relay and power supply ON
- Galvanically separated power supply

### Product Description

DUA01 and PUA01 are precise AC/DC over voltage monitoring relays. They can also be used as 1-phase or 3-phase over current monitoring relays when connected with MI or MP current transformers.

Owing to the built-in latch function, the ON-position of the relay output can be maintained. The red LED indicates the alarm status.

## Mode of Operation

DUA01 and PUA01 monitor both AC and DC over voltage. When connected with MI or MP current transformer (using the 0.4 - 4 V<sub>p</sub> range) they can monitor 1-phase or 3-phase AC currents up to 500 A.

### Example 1

(connection between terminals Z1, Y1 or 8, 9 - latch function enabled)

The relay operates and latches in operating position when the measured value exceeds the set level. Provided that the voltage has dropped min. 4% below the set point (see hysteresis), the relay releases when the interconnection between terminals Z1, Y1 or 8, 9 is interrupted or the power supply is interrupted as well.

### Example 2 (MI CT)

(no connection between terminals Z1, Y1 or 8, 9)

The relay operates when the current flowing through the CT exceeds the set level. It releases when the current drops min. 4% below the set level (see hysteresis) or when power supply is interrupted.

### Example 3 (MP CT)

(no connection between terminals Z1, Y1 or 8, 9 - latch function disabled)

The relay operates when the maximum current flowing through the CT exceeds the set level. It releases when the maximum current drops min. 4% below the set level (see hysteresis) or when power supply is interrupted.

## Range - Level Setting

Adjust the measuring range setting the DIP switches 1 to 4 as shown below. To access the DIP switches open the grey plastic cover using a screwdriver as shown below.

DIP Switch	Position	Measuring range
1	OFF	0.4 to 4 V <sub>p</sub>
2	OFF	2 to 20 VAC/DC
3	OFF	5 to 50 VAC/DC
4	ON	20 to 200 VAC/DC
4	ON	50 to 500 VAC/DC

### Centre knob:

Setting of voltage on relative scale: from 10 to 110% of the full-scale value.

### Hysteresis:

Approx. 4% of set value, it can be extended by inserting a resistor between terminals Z1, Y1 or 8, 9.

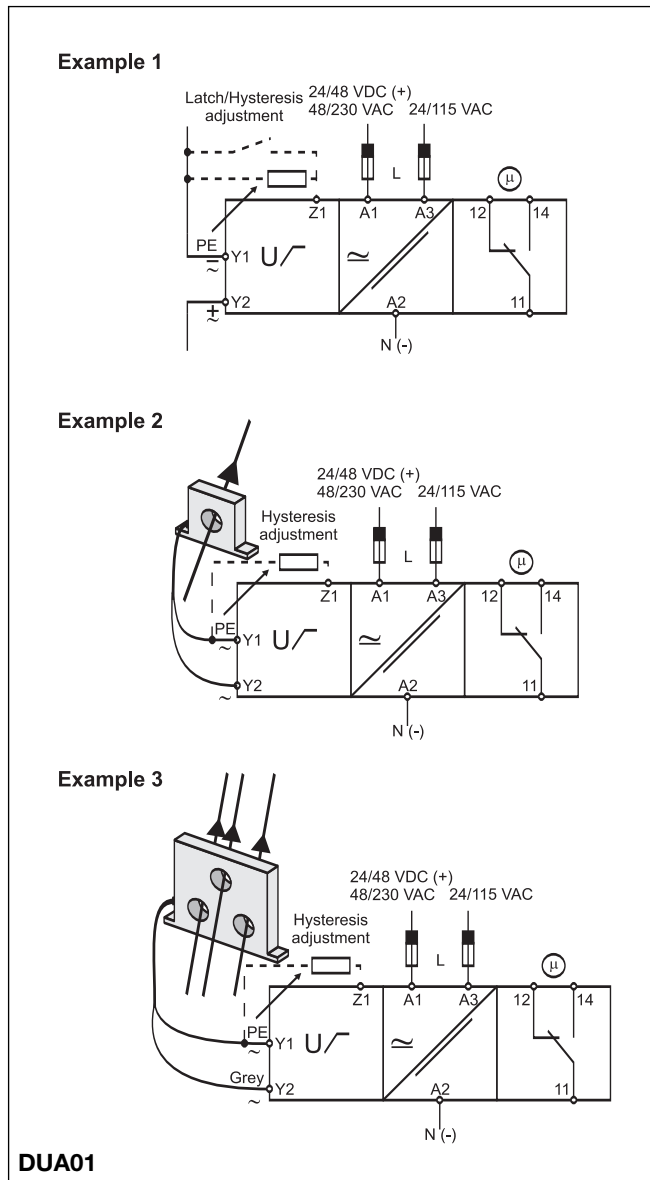

### Approx. resistor values:

10%:	180 k $\Omega$
25%:	47 k $\Omega$
50%:	22 k $\Omega$
75%:	15 k $\Omega$
Latch:	< 500 $\Omega$
