description

The TM2TR64EPH is a 16M-byte, 168-pin DIMM. The DIMM is composed of eight TMS626812BDGE 2 097 152 x 8-bit SDRAMs, each in a 400-mil, 44-pin plastic TSOP mounted on a substrate with decoupling capacitors. See the TMS626812B data sheet (literature number SMOS693).

The TM4TR64EPH is a 32M-byte, 168-pin DIMM. The DIMM is composed of sixteen TMS626812BDGE 2 097 152 x 8-bit SDRAMs, each in a 400-mil, 44-pin plastic TSOP mounted on a substrate with decoupling capacitors.

The TM2TR72EPH is an 16M-byte, 168-pin DIMM. The DIMM is composed of nine TMS626812BDGE 2 097 152 x 8-bit SDRAMs, each in a 400-mil, 44-pin plastic TSOP mounted on a substrate with decoupling capacitors.

The TM4TR72EPH is a 32M-byte, 168-pin DIMM. The DIMM is composed of eighteen TMS626812BDGE 2 097 152 x 8-bit SDRAMs, each in a 400-mil, 44-pin plastic TSOP mounted on a substrate with decoupling capacitors.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

operation

The TM2TR64EPH operates as eight TMS626812BDGE devices that are connected as shown in the TM2TR64EPH functional block diagram. The TM4TR64EPH operates as sixteen TMS626812BDGE devices connected as shown in the TM4TR64EPH functional block diagram.

The TM2TR72EPH operates as nine TMS626812BDGE devices that are connected as shown in the TM2TR72EPH functional block diagram. The TM4TR72EPH operates as eighteen TMS626812BDGE devices connected as shown in the TM4TR72EPH functional block diagram.

dual-in-line memory module and components

The dual-in-line memory module and components include:

- PC substrate: 1,27 ± 0,1 mm (0.05 inch) nominal thickness; 0.005 inch/inch maximum warpage
- Bypass capacitors: Multilayer ceramic
- Contact area: Nickel plate and gold plate over copper

absolute maximum ratings over operating ambient temperature range (unless otherwise noted)†

Supply voltage range, V_{DD} . . . . –0.5 V to 4.6 V
Voltage range on any pin (see Note 1) . . . . – 0.5 V to 4.6 V
Short-circuit output current . . . . 50 mA
Power dissipation: TM2TR64EPH . . . . 8 W
TM4TR64EPH . . . . 16 W
TM2TR72EPH . . . . 9 W
TM4TR72EPH . . . . 18 W
Operating ambient temperature range, T_A . . . . 0°C to 70°C
Storage temperature range, T_{stg} . . . . – 55°C to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values are with respect to V_{SS}.

recommended operating conditions‡

		MIN	NOM	MAX	UNIT
V_{DD}	Supply voltage	3	3.3	3.6	V
V_{SS}	Supply voltage		0		V
V_{IH}	High-level input voltage	2		V_{DD} + 0.3	V
$V_{IH\text{-}SPD}$	High-level input voltage for the SPD device	0.7*V_{DD}		V_{DD} + 0.5	V
V_{IL}	Low-level input voltage	–0.3		0.8	V
T_A	Operating ambient temperature	0		70	°C

‡ The overshoot and undershoot voltage duration is less than or equal to 3 ns with no input clamp diode.

capacitance over recommended ranges of supply voltage and ambient temperature, f = 1 MHz (see Note 2)§

PARAMETER		TMxTRxxEPH		UNIT
		MIN	MAX

† See Parameter Measurement Information for load circuits in the TMS626812B data sheet (literature number SMOS693).
‡ All references are made to the rising transition of CLK, unless otherwise noted.
§ Specifications in this table represent a single SDRAM device.

NOTES: 10. t_{AC} is referenced from the rising transition of CLK that precedes the data-out cycle. For example, the first data-out t_{AC} is referenced from the rising transition of CLK0 that is CAS latency minus one cycle after the READ command. Access time is measured at output reference level 1.4 V.
11. t_{LZ} is measured from the rising transition of CLK that is CAS latency minus one cycle after the READ command.
12. t_{HZ} MAX defines the time at which the outputs are no longer driven and is not referenced to output voltage levels.
13. For read or write operations with automatic deactivate, t_{RCD} must be set to satisfy minimum t_{RAS}.
14. Transition time, t_T, is measured between V_{IH} and V_{IL}.

serial presence detect

The serial presence detect (SPD) is contained in a 256-byte serial EEPROM located on the module. The SPD nonvolatile EEPROM contains various data such as module configuration, SDRAM organization, and timing parameters (see Table 1 – Table 4). Only the first 128 bytes are programmed by Texas Instruments, while the remaining 128 bytes are available for customer use. Programming is done through an IIC bus using the clock (SCL) and data (SDA) signals. All Texas Instruments modules comply with the current JEDEC SPD Standard. See the Texas Instruments *Serial Presence Detect Technical Reference* (literature number SMMU001) for further details.

SPD contents of each TMxTRxxEPH device are listed in the following tables:

Table 1—TM2TR64EPH   Table 2—TM4TR64EPH
Table 3—TM2TR72EPH   Table 4—TM4TR72EPH

Table 1. Serial Presence Detect Data for the TM2TR64EPH

D. Dimension includes depanelization variations; applies between notch and tab edge.
E. Outline may vary above notches to allow router/panelization irregularities.

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
