**DESCRIPTION**

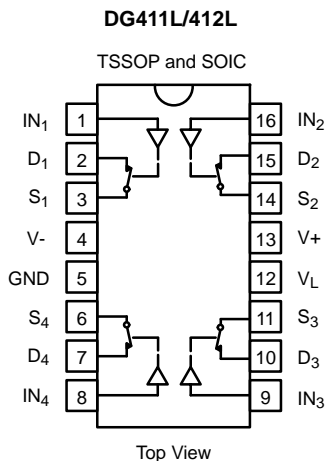

The DG411L/412L/413L are low voltage pin-for-pin compatible companion devices to the industry standard DG411/412/413 with improved performance

Using BiCMOS wafer fabrication technology allows the DG411L/412L/413L to operate on single and dual supplies. Single supply voltage ranges from 3 to 12 V while dual supply operation is recommended with  $\pm 3$  to  $\pm 6$  V.

Combining high speed ( $t_{ON}$ : 19 ns), flat  $r_{DS(on)}$  over the analog signal range (5  $\Omega$ ), minimal insertion lose (-3 dB at 280 MHz), and excellent crosstalk and off-isolation performance (-50 dB at 50 MHz), the DG411L/412L/413L are ideally suited for audio and video signal switching.

The DG411L and DG412L respond to opposite control logic as shown in the Truth Table. The DG413L has two normally open and two normally closed switches.

Notes:

- Refer to PROCESS OPTION FLOWCHART.
- Room = 25°C, Full = as determined by the operating temperature suffix.
- Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
- The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
- Guaranteed by design, not subject to production test.
- V<sub>IN</sub> = input voltage to perform proper function.
- Leakage parameters are guaranteed by worst case test conditions and not subject to test.
